

User Guide for RESCUE Mobile Application

This is the official user manual for the rescue app

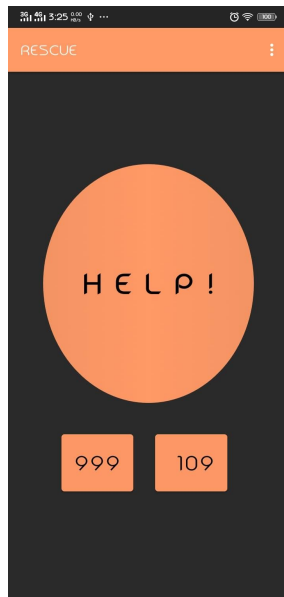

Project Done By:

Farzana Tabassum,IUT SWE,5th Semester

And

Kashifa Kawakib Hussain,IUT CSE,5th Semester

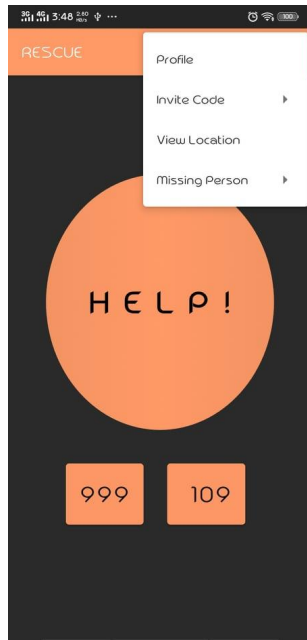

Homepage

Once users download the application ,the homepage will consist of three buttons and a drop down..

The buttons labelled '**999**' and '**109**' will call the hotline numbers they are labelled after.

The '**HELP!**' button will send a message to all three of the user's emergency contacts,saying they are in danger.The users location will also be sent to their contacts.

The drop down menu has four options
Profile, **Invite Code**, **View Location** and **Missing Person**

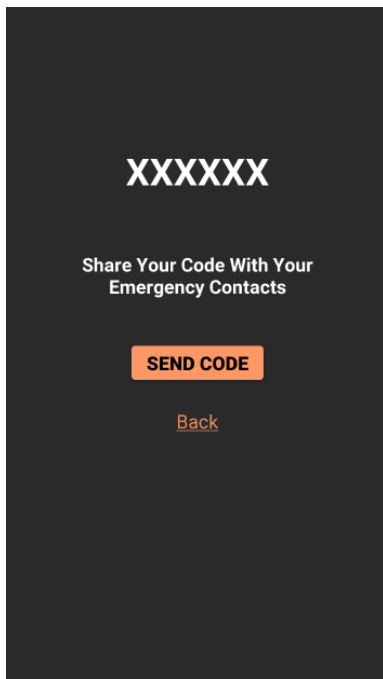

Profile

When users click the Profile option the first time, they will be asked to sign up and provide the above information. From then onwards, when they click the profile button, they will be allowed to view and update certain information in their profile.

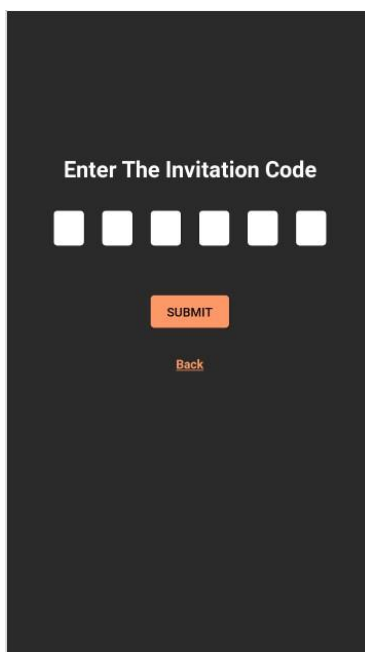

Invite Code

When invite code is pressed, users will be given two sub-options:

My code and **Add friend**.

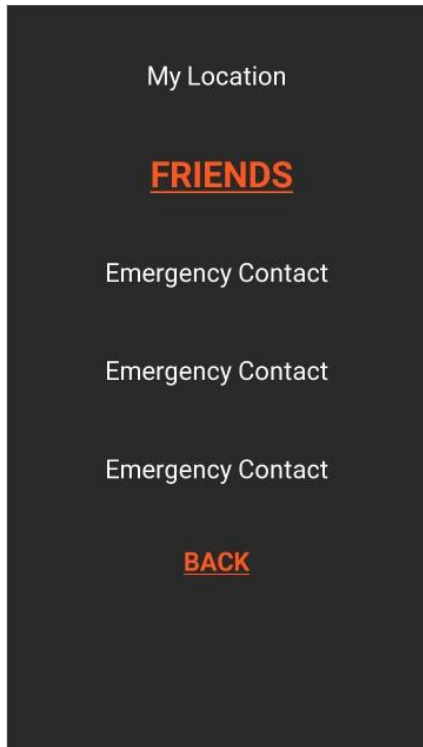

The **My code** option opens the following screen and gives the user the option of sending their code to their three emergency contacts via sms.

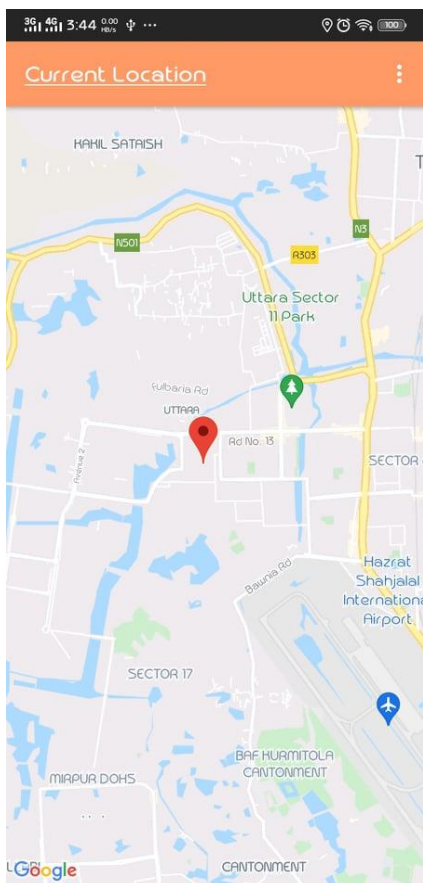

When users press the Add friend option they can enter a code they received from their friend via sms. A user can connect with a maximum of three users with the application.

View Location

When the View Location option is pressed the user will see a screen with their name as well as their friends names.

Here we need to click 'Emergency Contact'

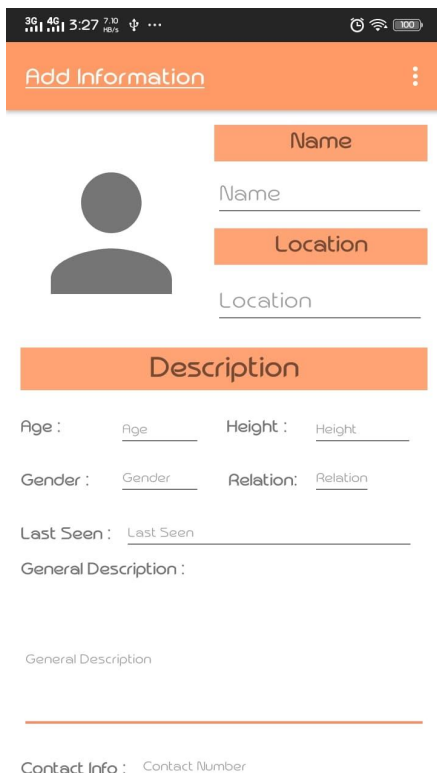

If the user presses any of the names on the screen then they will be able to view that person's real time location.

Missing Persons

The Missing Persons option has two sub options:

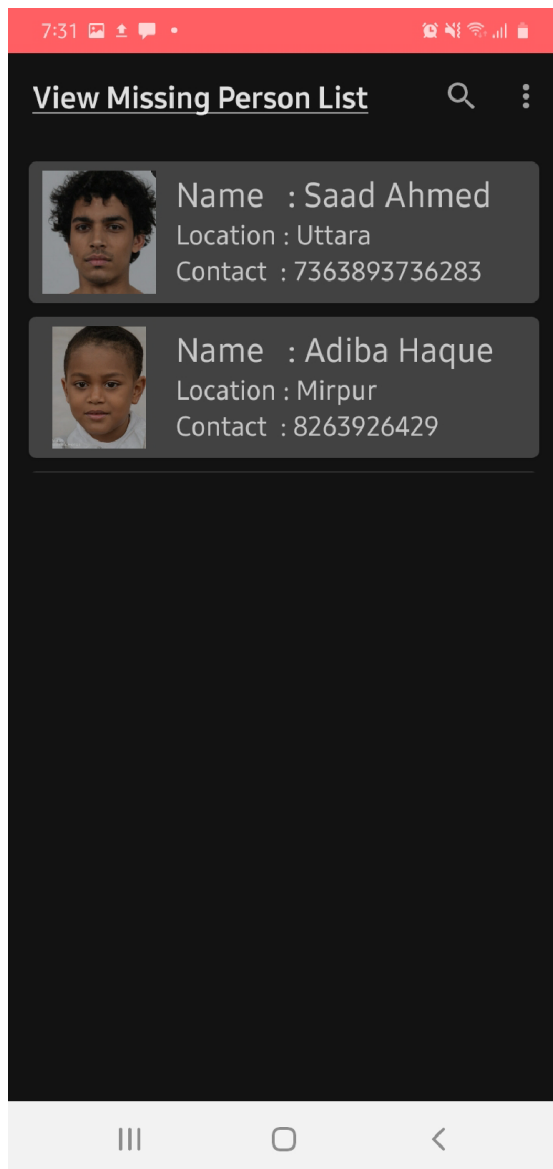

Add and View List

The screenshot shows a mobile application interface for adding information about a missing person. The form is titled 'Add Information' and includes a profile icon placeholder. The fields are organized as follows:

- Name:** A text input field.
- Location:** A text input field.
- Description:** A section containing several fields:
 - Age:** A text input field.
 - Height:** A text input field.
 - Gender:** A text input field.
 - Relation:** A text input field.
 - Last Seen:** A text input field.
 - General Description:** A large text area for a detailed description.
- Contact Info:** A text input field for the contact number.

In the **Add** option, the user will be asked to fill in the following details of the missing person. This will then be stored in the database and other users of the application will get a notification that someone went missing.

View List will give the user a list of all the people who went missing. Clicking on any one of them will give the details of the missing person
